OUTPUT MANAGEMENT

OUR PRACTICE

“TO HELP OUR CUSTOMERS MEET THEIR OUTPUT MANAGEMENT CHALLENGES WITH THE MOST FLEXIBLE, RELIABLE, COST-EFFECTIVE SOLUTIONS”

Customer service requirements, regulatory compliance, “green” initiatives, a highly-mobile workforce and minimizing IT costs are just a few of the major challenges that organizations face today in effectively managing mainframe output. Ensuring that a business remains competitive requires greater levels of automation in output management. Since its establishment in 1982, Software Engineering of America (SEA) has built its reputation as a leader in output management solutions by helping our worldwide customer base overcome these challenges with premier software and unparalleled expertise.

OUTPUT MANAGEMENT CHALLENGES & SOLUTIONS

CUSTOMER SERVICE:

Timely, high-quality, customer service is a competitive advantage for today’s organizations. Your workforce and your customers are increasingly mobile - expecting their printed and electronic output to be available where needed. SEA output management solutions enable your documents to be bundled and distributed, safely and securely, for viewing on the mainframe or the web, in numerous formats like text reports, Excel spreadsheets, PDF documents and many more.

REGULATORY COMPLIANCE:

Today’s government and industry regulations demand that businesses manage and control their document output more than ever before. SEA output management solutions are designed to enable you to fully secure report content such that authorized users can see only the portion they are entitled to see. Furthermore, report management features ensure both the proper archival of reports for regulatory reasons and access to archived reports as needed.

“GREEN” INITIATIVES:

Every conscientious organization is taking steps to reduce their environmental footprint. Reducing the volume of printed output is a major step in the right direction, and it typically results in significant cost savings as well. By switching to electronic delivery and viewing of reports, organizations are saving up to 90% of output management costs as compared to printing. SEA output management solutions are part of an integral paperless strategy that supports Green Data Center Guidelines.

MINIMIZING IT COSTS:

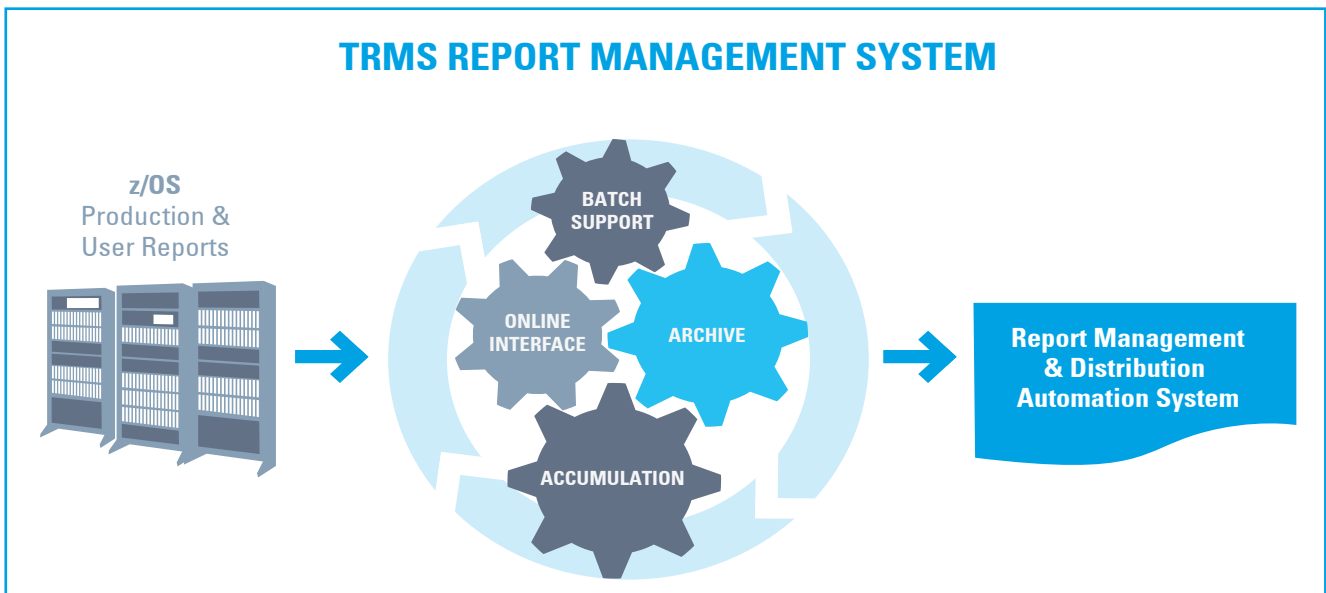

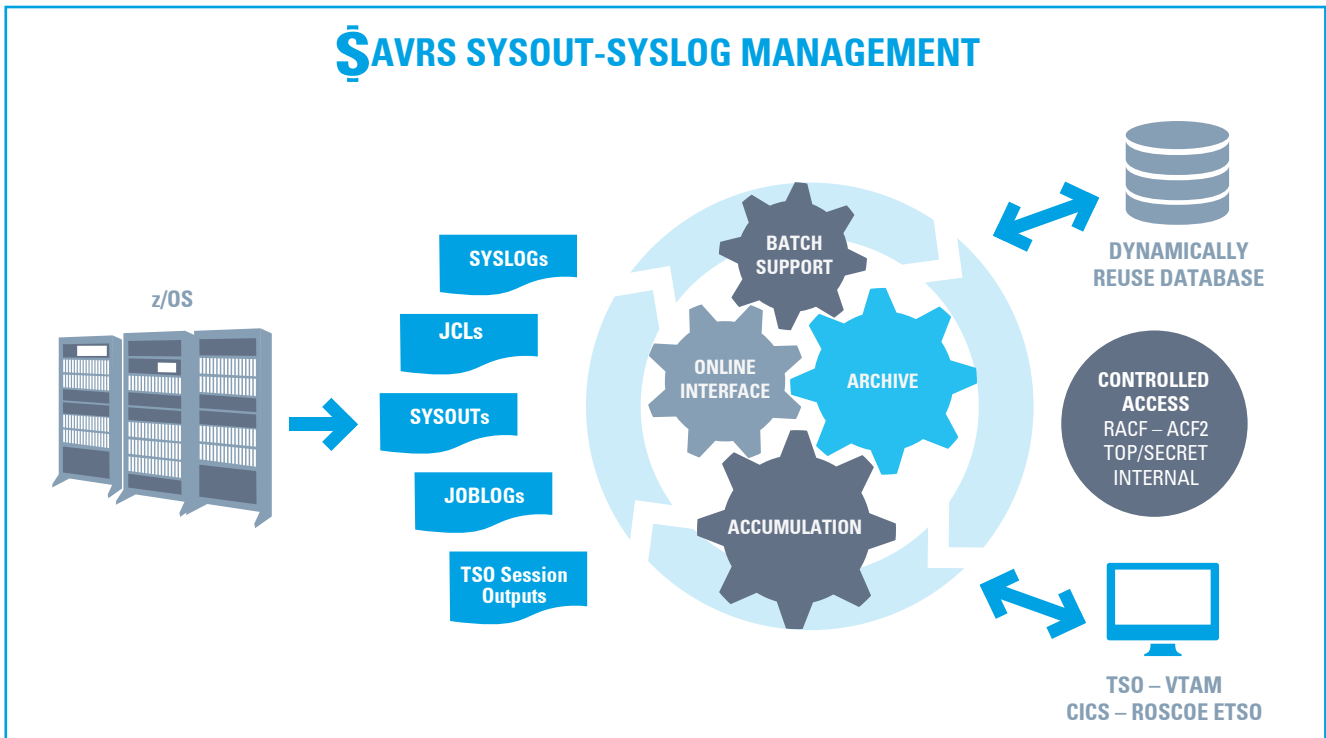

Business studies have shown that most organizations are spending far more than they realize on document output. This can represent a huge opportunity for cost savings. By eliminating paper and personnel costs related to printing and distribution of reports, and by reducing software maintenance costs, SEA output management solutions help organizations to drastically decrease the cost of delivering mainframe reports.

SEA OUTPUT MANAGEMENT

SEA’s Output Management solution is the ideal option for access to critical business information while remaining cost effective & efficient. Higher levels of automation & functionality ensure regulatory compliance, while higher levels of flexibility help meet business unit reporting requirements. SEA’s Output Management solution provides the results you need:

- Automated accumulation, distribution, viewing & archival of reports & system logs
- Accurate, reliable & timely distribution of reports
- Secure viewing of all or portions of reports by only authorized recipients
- Flexible report access via mainframe, web pages, email & pc-based applications
- Flexible archival / retrieval rules ensure compliance with regulatory policies
- Integrated paperless strategy to comply with Green Datacenter Guidelines
- Reduced software maintenance costs

SEA PROVIDES THE HIGHEST QUALITY SOFTWARE SOLUTION ACCOMPANIED BY OUTPUT MANAGEMENT EXPERTS AND THE BEST VENDOR SUPPORT SERVICES IN THE INDUSTRY.
